Vehicle-mounted Detection Unit

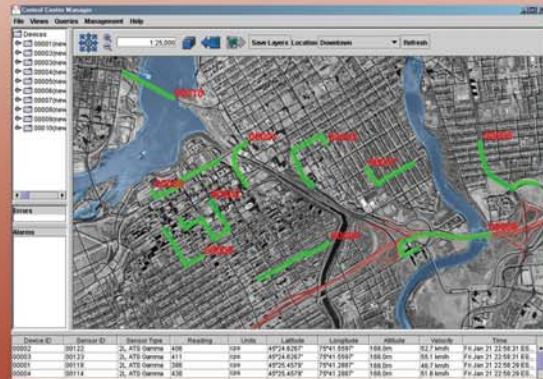

Person-carried Detection Unit

Static Detection Unit

**CBRN Surveillance Network**  
 Mobile and Static Detection Units (DUs) can be deployed with a variety of CBRN Sensors. Together, they form a dynamic CBRN Surveillance Network. Vehicle-mounted DUs provide cost-effective surveillance of an entire Community. In a Critical Facility, Static DUs provide targeted surveillance of stationary assets and entry/exit points, while Person-carried DUs add resolution and redundancy. All DUs are ruggedized, and are ideally suited for covert surveillance operations and incident site.
